

OBRA

Omnibus Budget Reconciliation Act 1987

"each resident must receive, and the facility must provide, the necessary care and services to attain or maintain the highest practicable physical, mental and psychosocial well-being in accordance with the comprehensive assessment and plan of care"

RehabCare

OBJECTIVES

- Demonstrate understanding of the difference in reimbursement and therapy service between PPS and PDPM.
- Facilitate IDT Collaboration in order to ensure optimal patient outcomes and appropriate reimbursement under PDPM.
-

RUGS IV

RehabCare

RUG Classification System

8 Major categories, 66 categories

- Rehab Plus Extensive Services
- Rehabilitation: Ultra High, Very High, High, Medium and Low
- Extensive Services (ventilator/respiratory care and tracheostomy only when administered post admission to the SNF)
- Special Care High
- Special Care Low
- Clinically Complex
- Behavioral Symptoms
- Cognitive Performance
- Reduced Physical Function

Rehab Clinical Services

Rehabilitation RUGs Criteria

Based on:

- Total therapy minutes delivered per assessment period
- Number of therapies involved in assessment period
- Frequency of each therapy delivered in assessment period
- Extensive services
- ADL "SUM" score

Rehab Clinical Services

RUG IV Therapy Minutes

Ultra	720	1 discipline 5 X/week 2 nd discipline at least 3X/week
Very	500	At least 1 discipline at least 5X/week
High	325	At least 1 discipline at 5X/week
Medium	150	5 days across any combination of disciplines
Low	45	45 minutes over three days (any combination of disciplines), 2 RNA programs 6x/week @ least 15 minutes each

WHAT DID THE START OF PPS MEAN TO THERAPISTS

- Unknown.....
- Changes in Rehab Departments
 - "in house"
 - "out house"
 - Reductions in salary
 - Reductions in force (layoffs)
- Changes in hours
 - Evaluations late in the evening
 - Weekend treatments and evaluations
- Confusion
 - Minutes.....days.....minutes.....days
 - RUG Scores

PT/OT Functional Component

Step 2: Functional Score

Under PDPM, the functional score for the PT and OT components is calculated based on ten Section GG items that were all found to be highly predictive of PT and OT costs per day:

- Two bed mobility items
- Three transfer items
- One eating item
- One toileting item
- One oral hygiene item
- Two walking items

DebutCore

24

PT/OT Functional Component

Functional Score

Section	GG Item	Score
GG0130A1	Self-care: Eating	0-4
GG0130B1	Self-care: Oral Hygiene	0-4
GG0130C1	Self-care: Toileting Hygiene	0-4
GG0170B1	Mobility: Sit to lying	0-4 (average of 2 items)
GG0170C1	Mobility: Lying to sitting on side of bed	
GG0170D1	Mobility: Sit to stand	0-4 (average of 3 items)
GG0170E1	Mobility: Chair/bed-to-chair transfer	
GG0170F1	Mobility: Toilet transfer	0-4 (average of 2 items)
GG0170J1	Mobility: Walk 50 feet with 2 turns	
GG0170K1	Mobility: Walk 150 feet	

25

PT/OT Functional Score

*Coded based on response to GG017011 (Walk 10 feet?)

26

PT and OT Categories

Clinical Category	PT & OT Function Score	PT & OT Care Mileage	PT Cost	OT Cost
Major Joint Replacement or Spinal Surgery	0-5	16	1.53	1.49
Major Joint Replacement or Spinal Surgery	6-9	18	1.60	1.63
Major Joint Replacement or Spinal Surgery	10-23	16	1.53	1.65
Major Joint Replacement or Spinal Surgery	24	10	1.52	1.53
Other Orthopedic	0-5	16	1.42	1.41
Other Orthopedic	6-9	17	1.61	1.55
Other Orthopedic	10-23	16	1.67	1.54
Other Orthopedic	24	11	1.16	1.15
Medical Management	0-5	11	1.13	1.17
Medical Management	6-9	11	1.42	1.44
Medical Management	10-23	16	1.52	1.54
Medical Management	24	11	1.05	1.11
Non-Orthopedic Surgery and Acute Neurologic	0-5	11	1.27	1.20
Non-Orthopedic Surgery and Acute Neurologic	6-9	11	1.42	1.49
Non-Orthopedic Surgery and Acute Neurologic	10-23	10	1.55	1.55
Non-Orthopedic Surgery and Acute Neurologic	24	12	1.03	1.09

- Missing section GG responses will receive zero points for the function score calculation
- Under PDPM, there is not a direct relationship between increasing dependence and increasing payment.

27

Adjustment Factor: PT Example

$$\text{Days 1-20} = 67.63 \times 1.52 \times 1.00 = \$102.79$$

$$\text{Day 21} = 67.63 \times 1.52 \times .98 = \$100.74$$

$$\text{Day 28} = 67.63 \times 1.52 \times .96 = \$98.68$$

1-20	1.00
21-27	0.98
28-34	0.96
35-41	0.94
42-48	0.92
49-55	0.90
56-62	0.88
63-69	0.85
70-83	0.84
77-83	0.82
84-90	0.80
91-97	0.78
98-100	0.76

Daily Rate for PT and OT

RURAL	PT	OT
PT/OT Category	TO	TO
Base rate	67.63	62.11
CMI	1.55	1.55
Total	\$104.82	\$96.27

Section GG

Assess the resident's self-care performance based on direct observation, as well as the resident's self-report and reports from qualified clinicians, care staff, or family documented in the resident's medical record during the three-day assessment period. *CMS anticipates that an interdisciplinary team of qualified clinicians is involved in assessing the resident during the three-day assessment period.*

Usual Performance

USUAL PERFORMANCE

- A resident's functional status can be impacted by the environment or situations encountered at the facility. Observing the resident's interactions with others in different locations and circumstances is important for a comprehensive understanding of the resident's functional status. If the resident's functional status varies, record the resident's usual ability to perform each activity. Do not record the resident's best performance and do not record the resident's worst performance, but rather record the resident's usual performance.

PDPM

- Medical necessity
- Needs of the patient/resident
- Patient centered care
- Reimbursement
 - Focus on unique, individualized needs, characteristics and goals of each patient
 - Quality Outcomes
- Group and Concurrent combined 25%

Put the Person in Person Centered!

Health-related Quality of Life – Section Q

- Residents who actively participate in the assessment process and in development of their care plan through interview and conversation often experience improved quality of life and higher quality care based on their needs, goals, and priorities.

Planning for Care – Section F

- Quality of life can be greatly enhanced when care respects the resident's choice regarding anything that is important to the resident.
- Interviews allow the resident's voice to be reflected in the care plan.
- Information about preferences that comes directly from the resident provides specific information for individualized daily care and activity planning.

RAI Manual, Chapter 3, Section F, Preferences for Customary Routines and Activities, page F-1

RAI Manual, Chapter 3, Section F, Preferences for Customary Routines and Activities, page F-1

If therapy no longer drives reimbursement for our patients, then is therapy necessary?

- Intensity
- Duration

Final Rule
page 242

- However, we continue to be concerned that under PDPM, providers may reduce the amount of therapy provided to SNF patients because of financial considerations. We agree with commenters that quality and outcomes measures (like those in the SNF Quality Reporting Program) would be a positive way to evaluate the efficacy of therapy provision, and we will take this into consideration for future policy development.
- Should we discover that the amount of therapy under PDPM is distinctly different from the amount of therapy under RUG-IV, we will evaluate the potential reasons for this change and consider potential actions, either at the provider or systemic level, to address these issues.

F676-F677

- §483.24(a) ...facility must provide the necessary care and services to ensure that a resident's abilities in activities of daily living do not diminish unless circumstances of the individual's clinical condition demonstrate that such diminution was unavoidable.
- §483.24(a)(1) A resident is given the appropriate treatment and services to maintain or improve his or her ability to carry out the activities of daily living, including those specified in paragraph (b) of this section ...
- §483.24(b) Activities of daily living. (includes communication)
- §483.24(a)(2) A resident who is unable to carry out activities of daily living receives the necessary services to maintain good nutrition, grooming, and personal and oral hygiene...

F 684 Quality of Care

- "To ensure facilities identify and provide needed care and services that are resident centered, in accordance with the resident's preferences, goals for care and professional standards of practice that will meet each resident's physical, mental, and psychosocial needs."

Functional Status Outperforms Comorbidities in Predicting Acute Care Readmissions in Medically Complex Patients

Briley L. Smith, MD^{1,2}, Paul Gerlach, MD¹, Richard L. Davidson, PhD¹, Jacqueline M. Mink¹, Coleen M. Bunch, MD^{1,2}, Payal K. Newkha, PhD¹, Elizabeth S. Scott, MD¹, John Hether, MD¹, D. Clay Keeney, MD, MSc^{1,2}, Richard L. Davidson, PhD¹, and Ashley C. Sengstacker, MD^{1,2}

OBJECTIVE: To evaluate whether functional status outperforms medical comorbidities in predicting acute care readmissions in medically complex patients.

DESIGN: Retrospective cohort study.

SETTING: A tertiary care hospital.

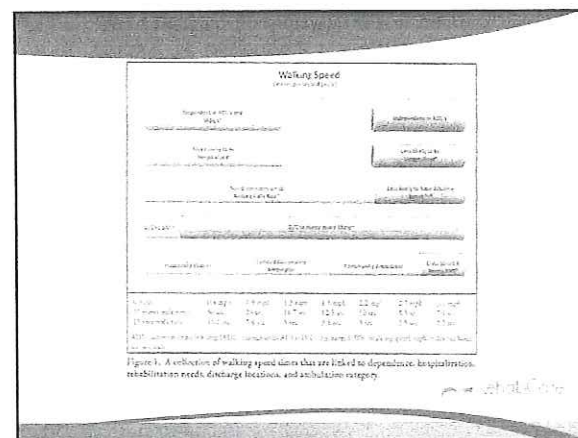

PATIENTS: 1,000 patients with a diagnosis of heart failure, chronic kidney disease, or chronic obstructive pulmonary disease (COPD) who were discharged from the hospital between 2008 and 2010.

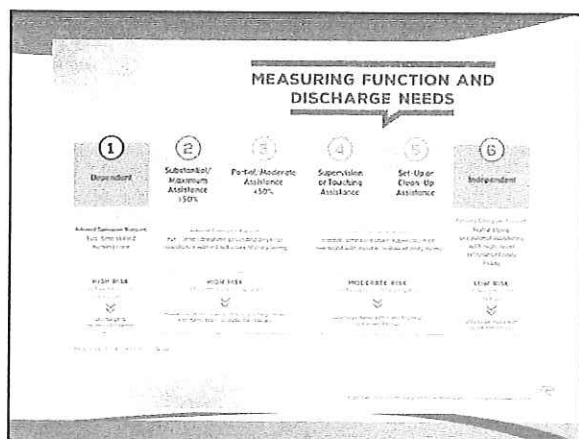

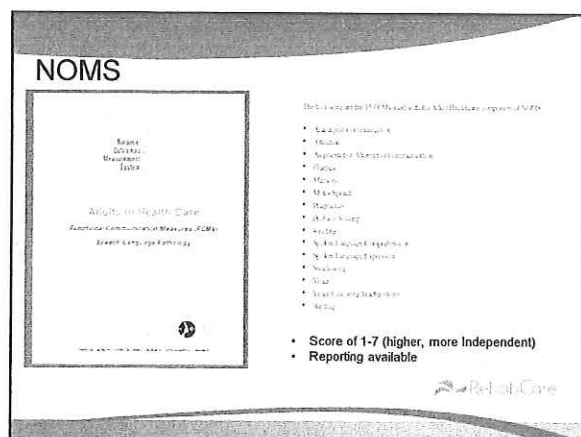

MEASUREMENTS AND MAIN RESULTS: Functional status, measured using the Barthel ADL index, was a stronger predictor of 30-day readmission than medical comorbidities, measured using the Charlson Comorbidity Index. The combination of functional status and medical comorbidities was the best predictor of readmission.

CONCLUSIONS: Functional status is a strong predictor of acute care readmissions in medically complex patients. Incorporating functional status into risk models may improve the accuracy of readmission risk prediction.

Readmission models based on functional status consistently outperform models based on medical comorbidities. There is an opportunity to improve current national readmission risk models to more accurately predict readmissions by incorporating functional data.

Therapy's Role in Reducing Hospitalization Examples

- Close monitoring of vital signs, skin, pain and other systems during therapy and communicated to nursing can assist in decreasing re-hospitalization
 - Cardiac, pulmonary, skin, infection etc.
- Exercise to improve cardiovascular and pulmonary health
- Exercise to improve strength, balance, mobility, function
- Decrease pain
- Identification of fall risk factors and development of treatment plan to improve balance, mobility, safety
- Medication Management
- Dysphagia – safe swallow strategies
- Cognitive evaluation and development of strategies, approaches and environmental modifications to facilitate use of remaining abilities
 - Decrease behaviors

RESTORATIVE NURSING

- Do you currently have a Restorative Nursing Program?
 - If so, how is it functioning?
 - Are programs consistent?
 - Who runs the program?
 - Is there a designated aid or are all CNAs responsible?
- Therapy and Nursing Partnership
 - Development of goals
 - Aid in training
- AANAC - Guide to Successful Restorative Programs

 RehabCare

IDT COLLABORATION

- Comprehensive Plan of Care
 - Insure optimal outcomes
 - Quality
- Prevent Re-hospitalizations
- Safe transitions

 RehabCare

Person Centered Meetings

- Pre-Admission
 - Purpose: To review potential patient/residents for admission. Review history and comorbidities. **Discuss d/c planning.**

ADDITIONAL THERAPY CONSIDERATIONS

- Staffing
 - Staffing ratio Evaluator to Assistant
 - SLP staffing
- Hours of operation
- Service Delivery

RehabCare

TREATMENT DELIVERY CHANGE

RUGS IV

- Reimbursement
 - Volume driven, case mix group
 - Quantity
- Group therapy limit 25%
- Minutes provided in group were divided by 4 in grouper
- Minutes for concurrent were divided by 2 in the grouper

PDPM

- Reimbursement
 - Focus on unique, individualized needs, characteristics and goals of each patient
 - Quality Outcomes
- Group and Concurrent combined 25%
- No longer driven by therapy utilization (minutes)

RehabCare

Concurrent and Group Therapy Limits

- Compliance with the concurrent/group therapy limit will be monitored by new items on the PPS Discharge Assessment (O0425); Providers will report the number of minutes, per mode and per discipline, for the entirety of the PPS stay
- If the total number of concurrent and group minutes, combined, comprises more than 25% of the total therapy minutes provided to the patient, for any therapy discipline, then the provider will receive a warning message on their final validation report

 RehabCare

Mode of Treatment Delivery

- Varied modes of treatment delivery are not new to therapists
 - Individual
 - Concurrent
 - Co-treatment
 - Group
- All modes of delivery are valid and must be:
 - Medically necessary
 - Clinically appropriate
 - Delivered at the appropriate time(s) throughout the course of treatment in order to be effective
- Different modes of delivery are chosen based on clinical appropriateness and patient benefit not therapist or department convenience

 RehabCare

MDS GROUP DEFINITION

- Group therapy is defined for Part A as the treatment of 4 residents, regardless of payer source, who are performing the same or similar activities, and are supervised by a therapist or an assistant who is not supervising any other individuals.
- For Medicare Part B, treatment of two patients (or more), regardless of payer source, at the same time is documented as group treatment.

 RehabCare

MDS CONCURRENT DEFINITION

- Concurrent therapy is defined as the treatment of 2 residents at the same time, when the residents are not performing the same or similar activities, regardless of payer source, both of whom must be in line-of-sight of the treating therapist or assistant for Medicare Part A. When a Part A resident receives therapy that meets this definition, it is defined as concurrent therapy for the Part A resident regardless of the payer source for the second resident.
- For Part B, residents may not be treated concurrently: a therapist may treat one resident at a time, and the minutes during the day when the resident is treated individually are added, even if the therapist provides that treatment intermittently (first to one resident and then to another).
- For all other payers, follow Medicare Part A instructions.

RehabCare

Benefits of Group and Concurrent Therapy

- Creates/imitates a real life atmosphere preparing resident for transition from therapy
- Socialization, peer support, psychosocial needs
- Reinforces learned skills. Patients learn from one another
- Motivation and willingness to participate
- Allows therapists to assess and teach generalization and carry over of skills acquired during individual therapy
- Provides self monitoring skills/awareness through peer interaction and feedback

RehabCare

Barriers

- Patient
 - Refusal
 - Isolation/infection
 - Behavioral issues
- Therapists
 - Lack of understanding the benefits, rules
 - Misconceptions/Myths
 - Organization and planning
- Facility - Operations
 - Physical space
 - Facility "buy in"
 - Supplies
 - Scheduling challenges – readiness, transport

RehabCare

Decisions regarding mode of therapy treatment delivery is:

- Made by the therapist
- Must be clinically appropriate and medically necessary
- Related to established plan of care and goals
- Documented clearly in the medical record

RehabCare

Rules of Navigation.....

Stay focused on the destination.....OPTIMAL OUTCOMES

- ALWAYS KEEP THE PATIENT IN THE CENTER
- All patient's are individuals.....their plan should be as well!
- Know regulations
- Do the "right thing"
- Educate and be educated
- Ask Questions
- Self Assess
- Remember the BASICS
- TEAMWORK
- Keep an open mind
- ADVOCATE
